

TECHCON 365 | CHICAGO 2026

# Extending Copilot with Connectors

*Powering Intelligent Agents with Your Data*

---

**Michael Goad & Gina Hoffmann**

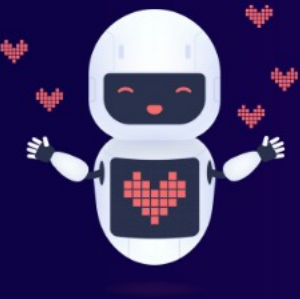

AI Business Solution Engineers • Microsoft

June 18, 2026 • McCormick Place, Chicago

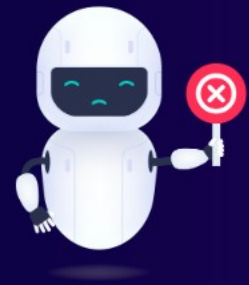

## PHOTOGRAPHY DURING THE SESSION

Feel free to capture the moment! Taking pictures of the presentation, during the session is perfectly fine.

## SELFIES WITH THE SPEAKER

We encourage interaction! If you'd like to take a selfie with the speaker, don't hesitate to ask. Most speakers will be happy to oblige during appropriate breaks.

## RECORDING AND LIVE STREAMING

Recording or live streaming the session, in part or in full, is strictly prohibited. Thank you for respecting our content and Speakers.

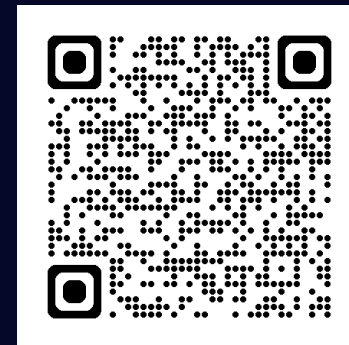

# About me

## Michael Goad

[ Senior Copilot Solution Engineer • AI Workspace • Microsoft ]

- I spend my days helping healthcare teams make sense of Copilot, agents, and AI without getting lost in the hype.
- 10+ years across enterprise tech, mobility, endpoint, Microsoft 365, and AI.
- Home Assistant tinkerer, guitar player, Xbox player with questionable K/D, dad, and Marvel nerd.
- Find me online

# Copilot Studio

## Build your own Agents

Build an AI Agent to handle your business processes by selecting from your choice of 1500+ Connectors, data, actions, and channels.

## Add deterministic workflows

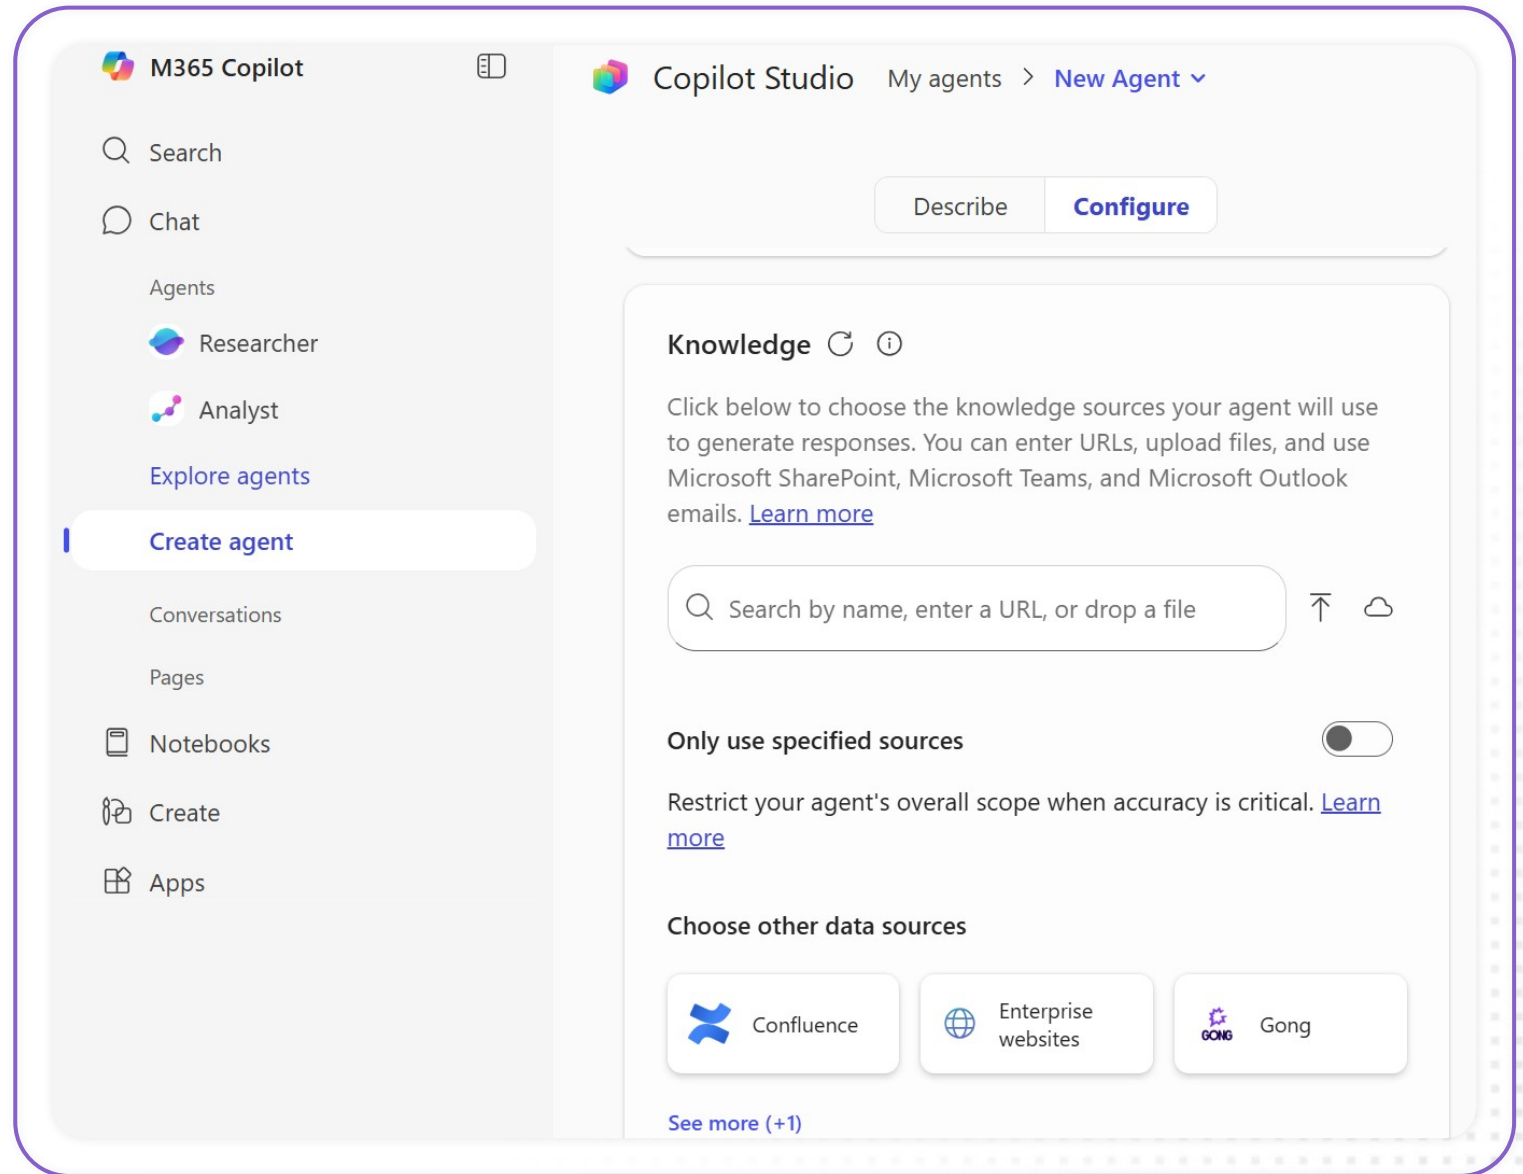

Eliminate repetitive tasks with enterprise-grade automation; build a standalone rules-based workflow for tighter control or add it to an Agent.

## Manage and secure at scale

IT stays in charge of every Agent across the organization with full visibility, security, and compliance controls.

Work IQ

# Microsoft 365 Data

- Brings together signals from your files, email, meetings, and chats so responses span across your work.
- Understands where work lives, including SharePoint sites, Teams meetings and channels, and who is involved.
- Uses signals like recency and relationships to prioritize what matters most right now.

# AI Is Only As Effective As The Data It Has Access To

# Copilot Connectors

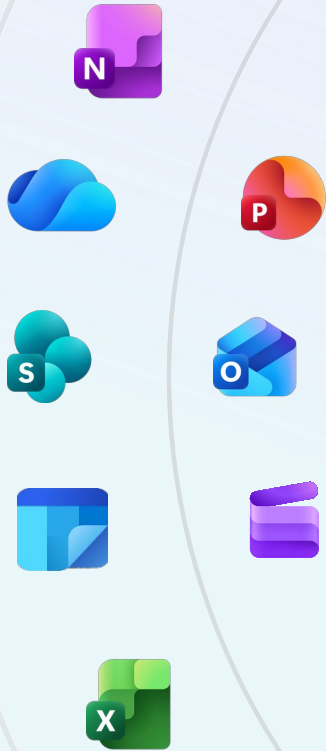

Copilot Connectors connect your  
Enterprise knowledge to WorkIQ and  
power Copilot experiences

# Connect Your 'Enterprise' Knowledge to Work IQ with Copilot Connectors

Connectors

# Connect Seamlessly with Enterprise-Grade Trust

## Connect Your Data

- Index enterprise data and build a semantic index
- Unite information from multiple sources into one index
- Enable Copilot to reason over your entire corpus—delivering contextual, relevant insights across all experiences

## Easy to Setup

- Choose from large catalog of ready to use connectors
- Setup within minutes
- Centrally enabled - No user setup required
- Available with eligible M365 enterprise & Copilot licenses

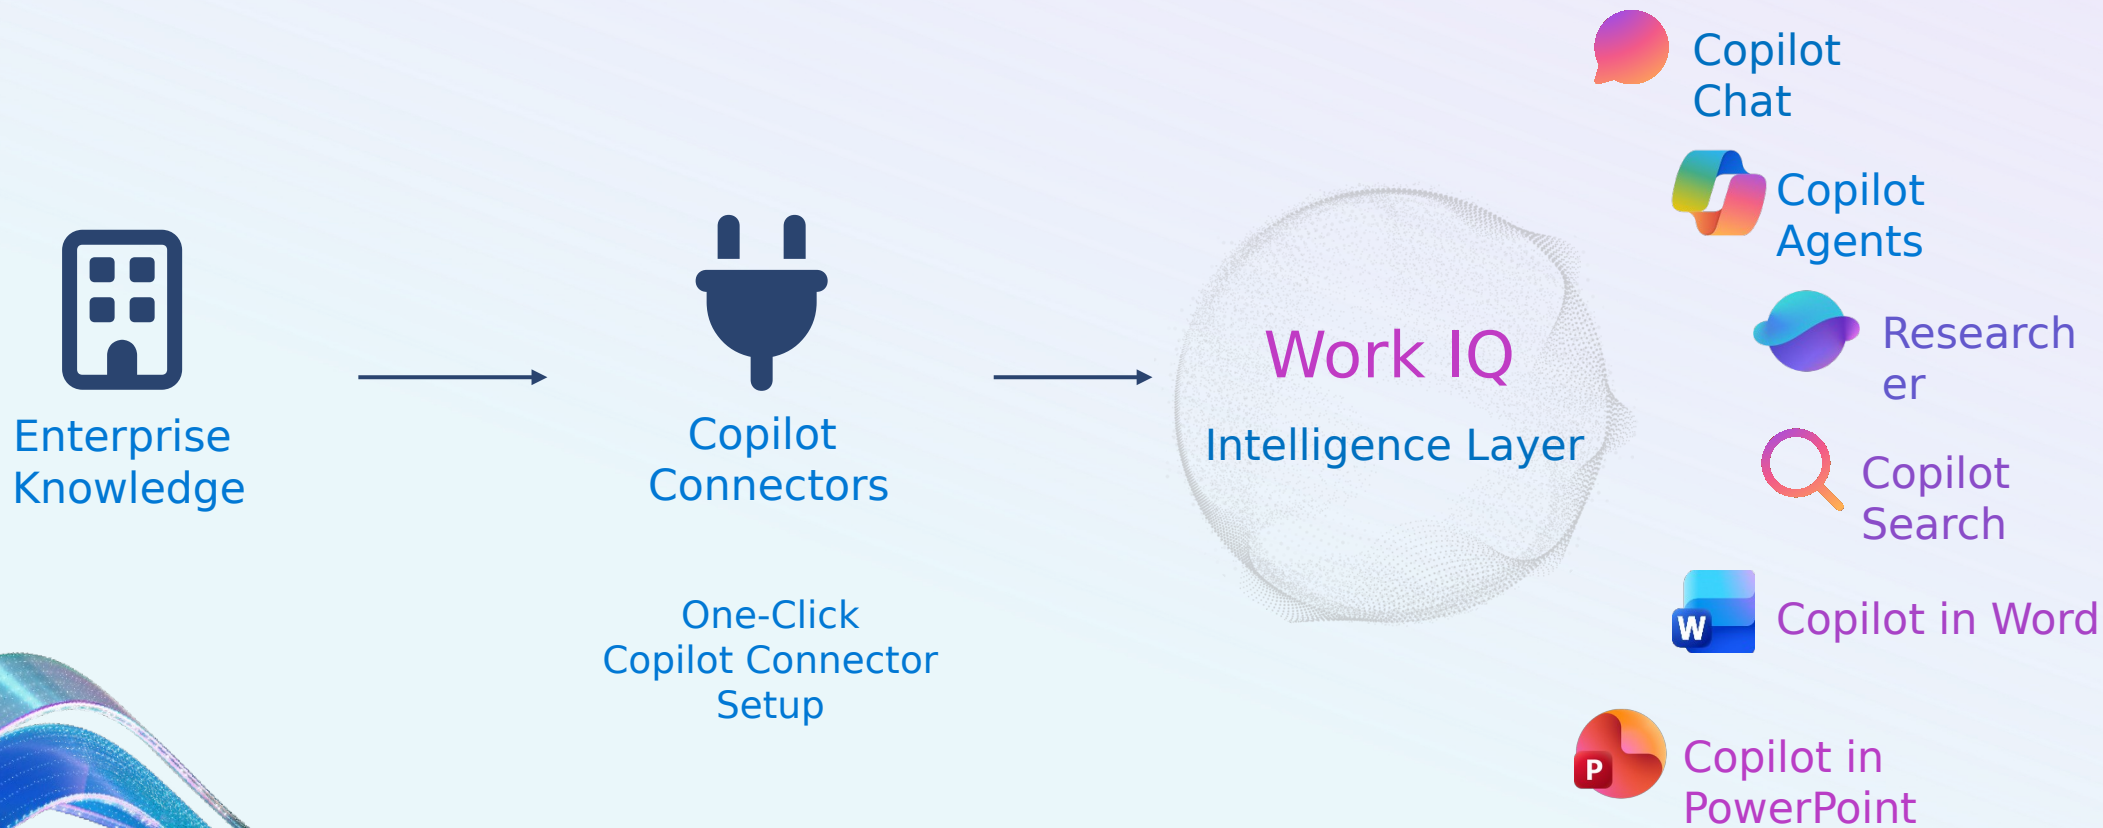

## Secure & Compliant

- Data source permissions respected
- Data stays in the customer tenant
- Microsoft 365's security, privacy, and trust boundaries honored

# Chat with Your Enterprise Data

Ask, analyze, summarize and more..

Copilot Connectors bring your enterprise data into Chat — so you can ask questions, analyze insights, and summarize information with grounded, contextual, and relevant responses you can trust.

The screenshot displays the M365 Copilot interface. On the left is a sidebar with navigation options: Search, Chat, Agents (Researcher, Analyst, Explore agents, Create agent), Conversations (selected), Pages, Notebooks, Create, and Apps. The main area shows a chat titled 'Azure Synapse and Power BI Refresh Frequency' with tabs for 'Work' and 'Web'. The chat history includes a question: 'What is the default refresh between Azure Synapse and Power BI; can it be near real-time?'. The Copilot response explains the default refresh behavior and near real-time options. At the bottom, there is a 'Message Copilot' input field, a 'Tools' button, a 'Sources' button, and a status bar showing 'Billie Vester' and a disclaimer: 'AI-generated content may be incorrect'.

M365 Copilot

Azure Synapse and Power BI Refresh Frequency

Today

What is the default refresh between Azure Synapse and Power BI; can it be near real-time?

Copilot Web search is OFF

Here's what I found about refresh behavior between **Azure Synapse** and **Power BI**, and whether near real-time is possible:

### Default Refresh Behavior

- When you connect Power BI to Azure Synapse, the refresh mode depends on the **storage mode**:
  - Import Mode**: Data is copied into Power BI's semantic model. Refresh happens on a **schedule** (e.g., daily or hourly) or on demand. This is **not real-time** because data is only as current as the last refresh. [Data Refresh in Power...](#)
  - DirectQuery Mode**: Power BI queries Synapse **live** for each visual interaction. This enables near real-time because visuals fetch data directly from Synapse without importing. [Data Refresh in Power...](#)
  - Live Connection**: Similar to DirectQuery but typically used with Analysis Services. [Data Refresh in Power...](#)

### Near Real-Time Options

- Automatic Page Refresh** in Power BI can make DirectQuery reports update at intervals as low as 1 second, provided:
  - The Synapse source can handle the query load.
  - Network latency and capacity performance are acceptable.
  - You configure either **fixed interval** or **change detection** refresh types. [Automatic Page Refre...](#)
- Best practice: Match refresh interval to data arrival rate. For example:
  - If Synapse updates every 20 minutes, set refresh interval  $\geq$  20 minutes.

Message Copilot

Tools Sources

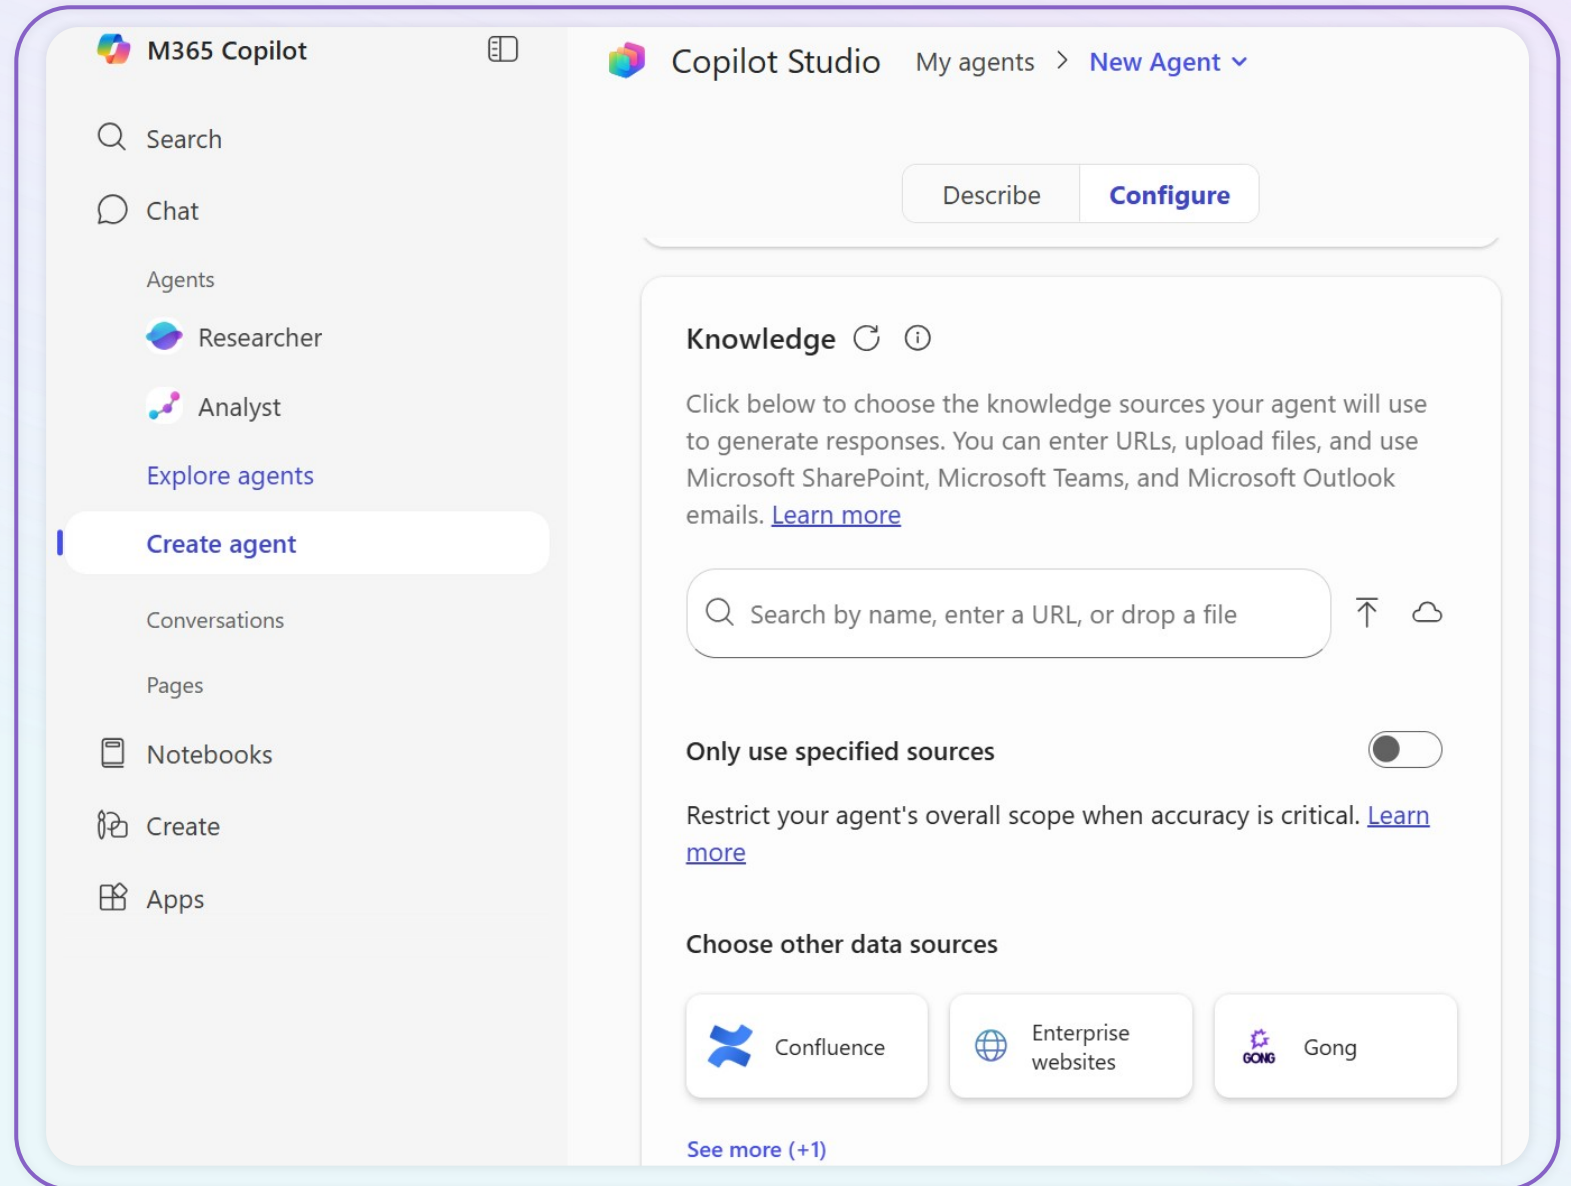

Billie Vester

AI-generated content may be incorrect

# Add Enterprise Knowledge to Agents

Turn your enterprise knowledge into intelligent workflows

Empower business workflows with Agents that use Copilot Connectors for grounded knowledge and trusted actions.

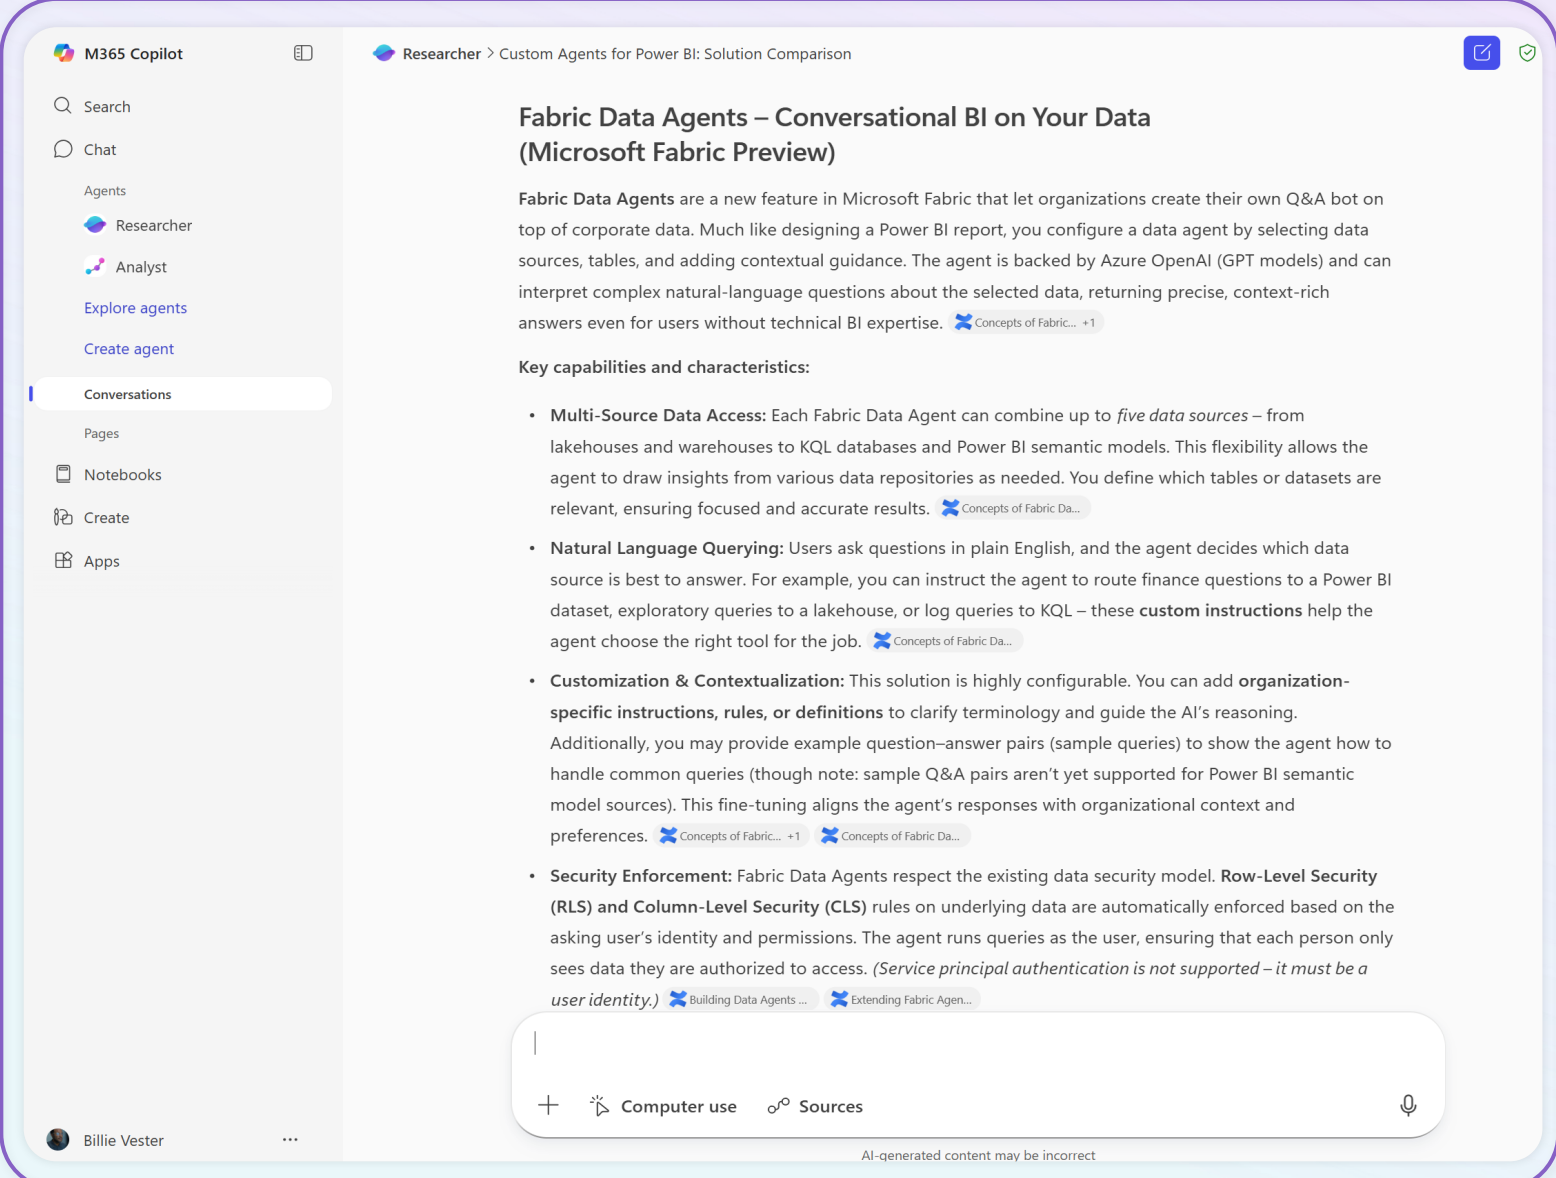

# Researcher with Copilot Connectors

Turning scattered data into deep insights

With Copilot Connectors, Researcher can analyze enterprise knowledge to generate deep insights, extract patterns and create research reports reducing manual toil.

The screenshot displays the Microsoft Copilot Researcher interface. On the left is a sidebar with navigation options: Search, Chat, Agents (with sub-options for Researcher, Analyst, Explore agents, and Create agent), Conversations, Pages, Notebooks, Create, and Apps. The main content area is titled 'Researcher > Custom Agents for Power BI: Solution Comparison'. It features an article titled 'Fabric Data Agents – Conversational BI on Your Data (Microsoft Fabric Preview)'. The article text describes Fabric Data Agents as a new feature in Microsoft Fabric that allow organizations to create their own Q&A bot on top of corporate data, backed by Azure OpenAI (GPT models). It lists key capabilities and characteristics:

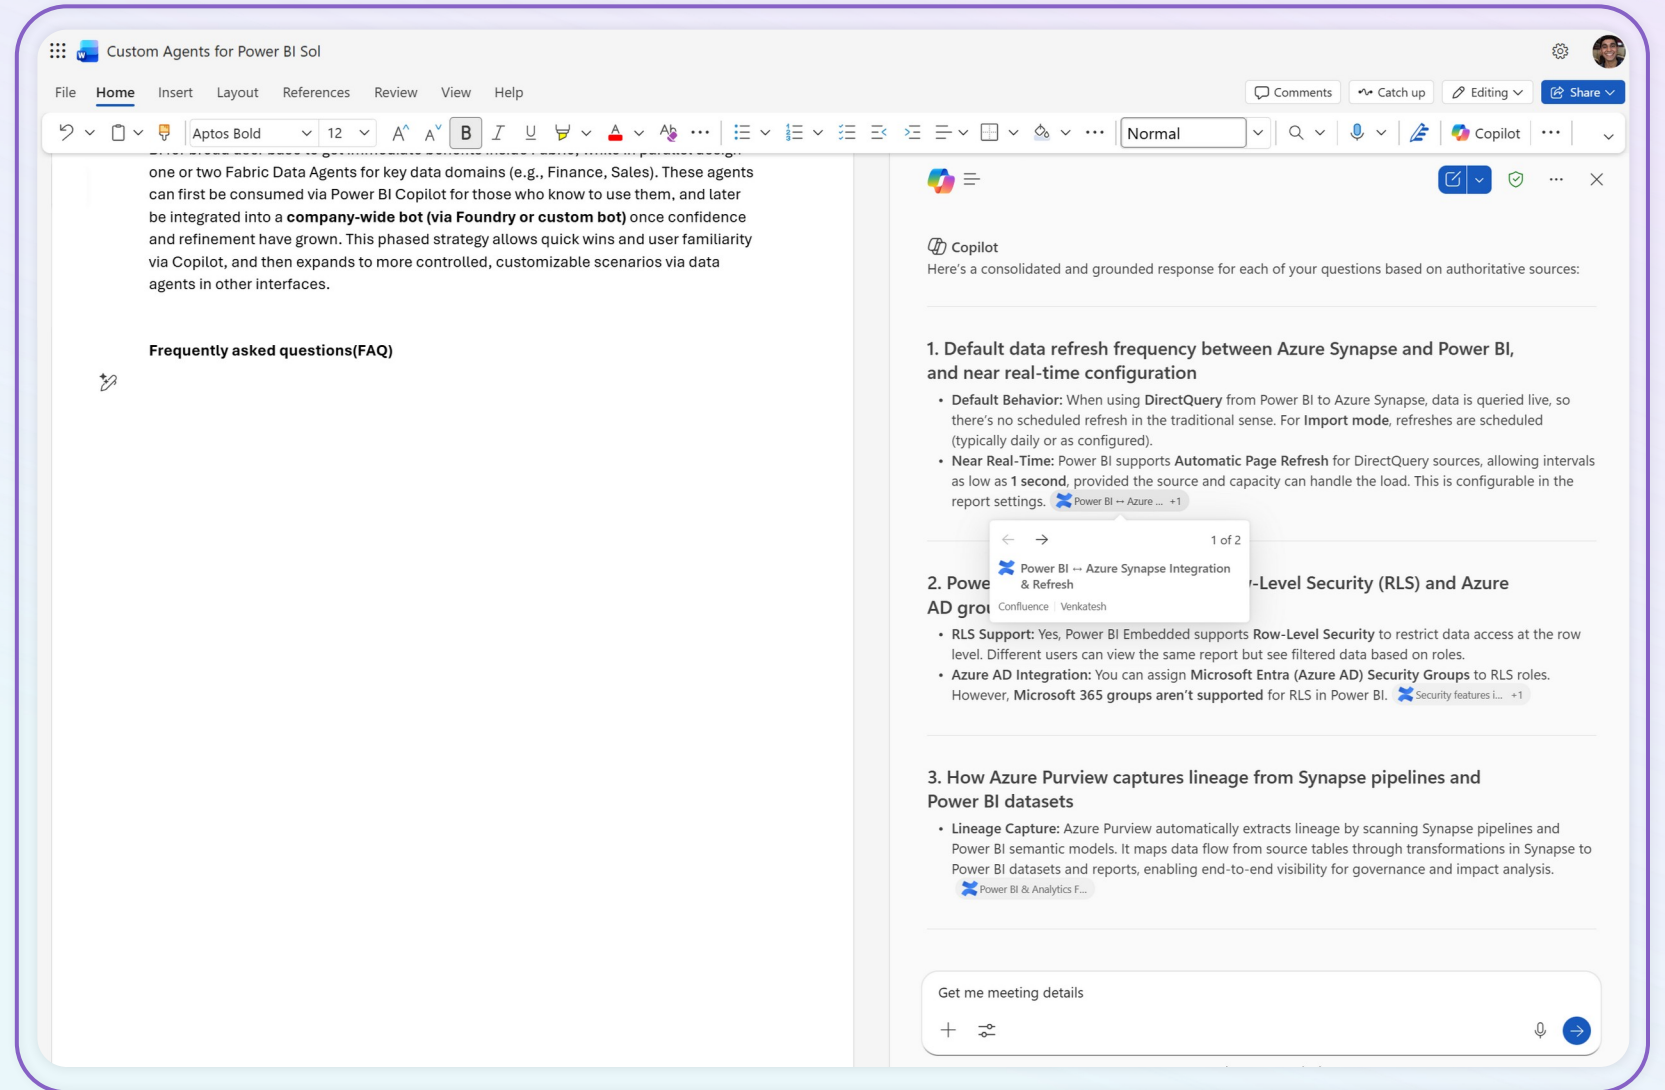

- Multi-Source Data Access:** Each Fabric Data Agent can combine up to *five data sources* – from lakehouses and warehouses to KQL databases and Power BI semantic models. This flexibility allows the agent to draw insights from various data repositories as needed. You define which tables or datasets are relevant, ensuring focused and accurate results.
- Natural Language Querying:** Users ask questions in plain English, and the agent decides which data source is best to answer. For example, you can instruct the agent to route finance questions to a Power BI dataset, exploratory queries to a lakehouse, or log queries to KQL – these **custom instructions** help the agent choose the right tool for the job.
- Customization & Contextualization:** This solution is highly configurable. You can add **organization-specific instructions, rules, or definitions** to clarify terminology and guide the AI's reasoning. Additionally, you may provide example question-answer pairs (sample queries) to show the agent how to handle common queries (though note: sample Q&A pairs aren't yet supported for Power BI semantic model sources). This fine-tuning aligns the agent's responses with organizational context and preferences.
- Security Enforcement:** Fabric Data Agents respect the existing data security model. **Row-Level Security (RLS) and Column-Level Security (CLS)** rules on underlying data are automatically enforced based on the asking user's identity and permissions. The agent runs queries as the user, ensuring that each person only sees data they are authorized to access. (*Service principal authentication is not supported – it must be a user identity.*)

At the bottom of the interface, there is a user profile for 'Billie Vester', a 'Computer use' button, a 'Sources' button, and a disclaimer: 'AI-generated content may be incorrect'.

# Connectors with Copilot in Word

Your enterprise knowledge, wherever you are..

Copilot Connectors bring your enterprise knowledge into Copilot in Word so you can draft, validate, and get insights without leaving your document. Stay in the flow and create content that's accurate and trusted.

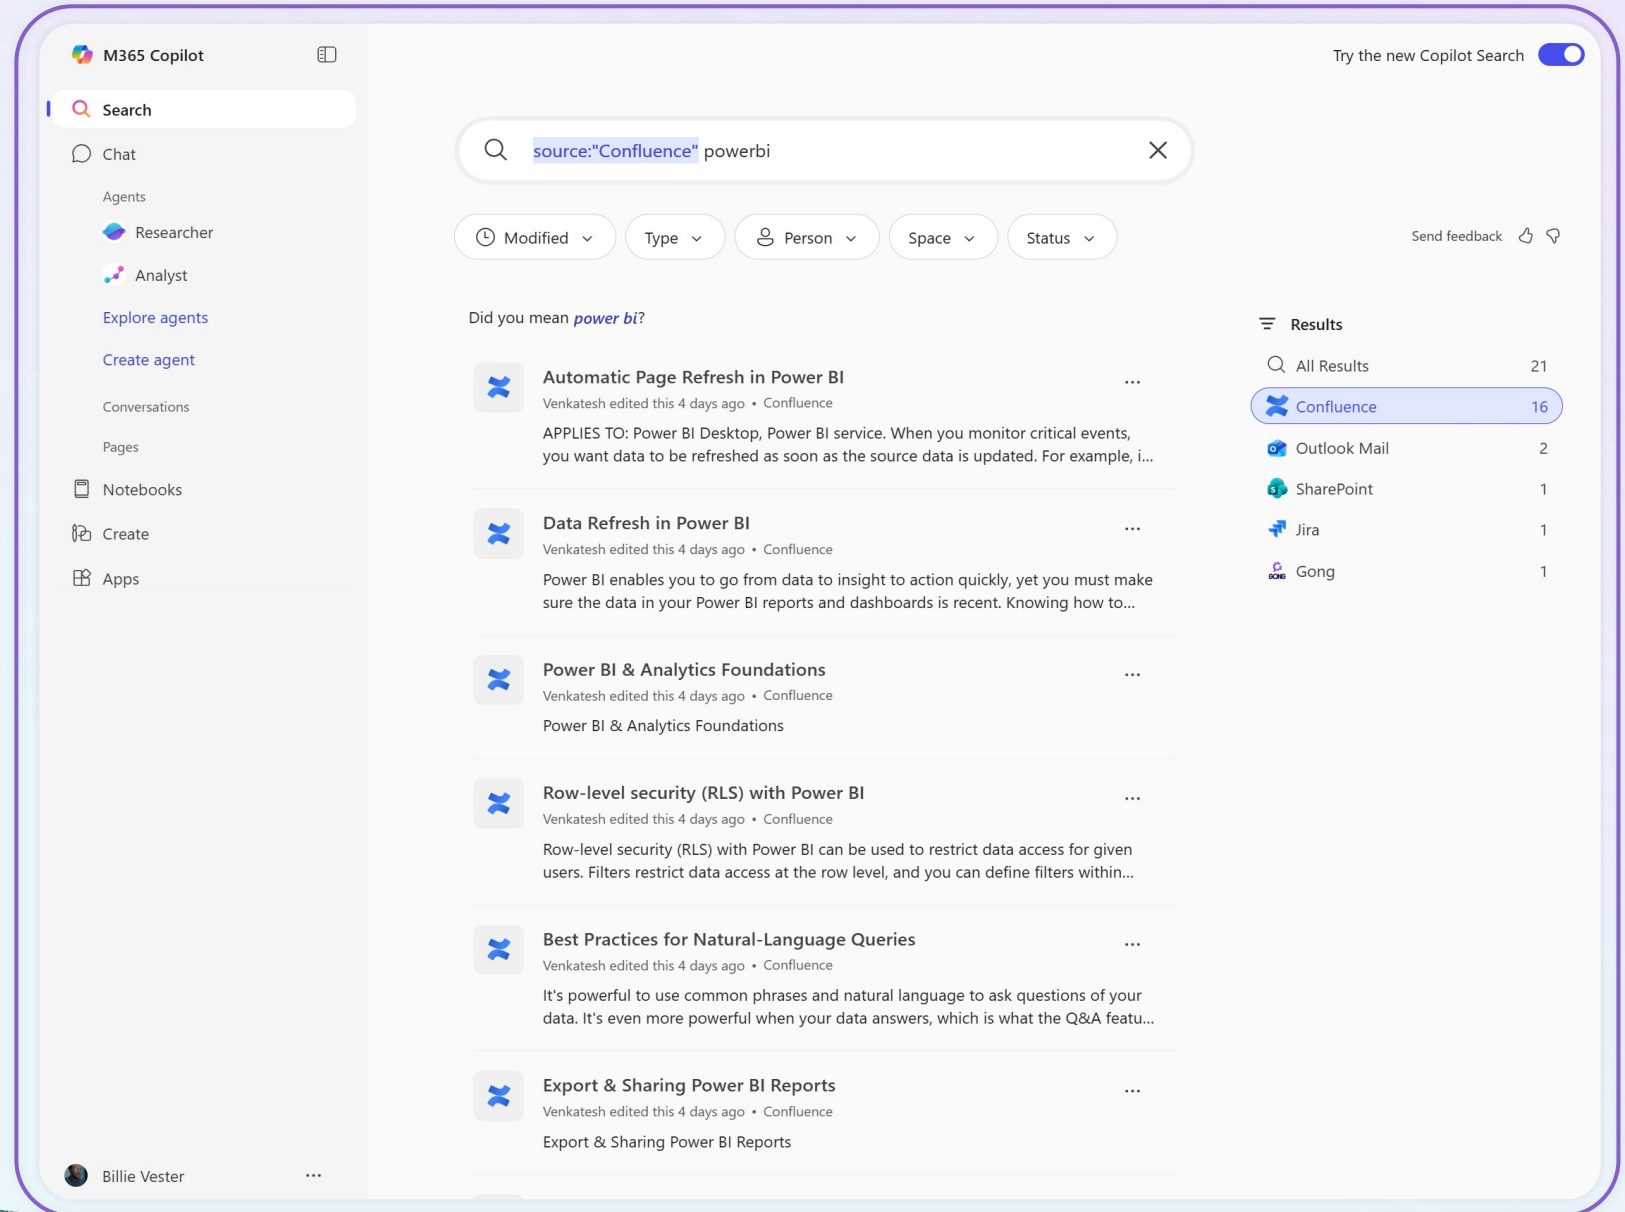

# Copilot Search with Connectors

Finding made easier...

Search once and find everything you need across all your organization's data leveraging Copilot Connectors, delivering comprehensive results in an instant.

# Connectors

No user configuration needed—data becomes discoverable and usable across Copilot experiences.

# Controlled Rollout to Users

Pilot, validate and scale  
with confidence

Admins can easily test  
Copilot Connectors with  
limited users, review  
outcomes, and expand  
organization-wide —  
keeping governance and  
control firmly in hand.

## Azure DevOps Work Items

⚙️ Custom setup

- ① Give a name that will be displayed to users in results

Display name \*

AzureDevOps

- ② Provide basic information about your ADO instance

Azure DevOps organization \*

Example: fabrikam

- ③ Authenticate your AzureDevOps instance

Authentication type \*

Select a method

- ④ Rollout to limited audience

# Monitor Connector Health

Monitor Connector health with built-in insights

Track health, indexing progress, and data coverage at a glance—giving admins the visibility and confidence to keep Connectors performing at their best.

# Connect Your LoB Data

## Build your own Connector

Leverage M365 Agents toolkit with Connector templates to connect your data via APIs.

Your custom Connector unlocks the rich Copilot experiences — reasoning, summarization, and grounded insights — across your organization's content.

# Unlock the value of your data with Copilot Connectors

Enable your organization to index items from ServiceNow, Confluence, Jira, Salesforce, File Share, and more, to be easily accessed and used across Microsoft 365 experiences

## ServiceNow Knowledge Base Connector

Index knowledge-base articles from ServiceNow, extend ServiceNow content into Microsoft 365 experiences, and enable intelligent querying and data analysis.

## ServiceNow Catalog Connector

Index accurate catalog information from ServiceNow to expedite request fulfillment and raise catalog requests, and enable catalog analysis for creation, tracking, and follow up.

## ServiceNow Tickets Connector

Index ServiceNow data to access ticket information and status, unify ticket search experience in Microsoft 365, and support ACL permissions to ticket data.

## Jira Connector

Enable indexing data of Jira issues, search for Jira issues directly in Copilot, and receive comprehensive context aware responses using semantic search.

## Confluence Connector

Index information from Confluence spaces, pages, and blogs, and enable admins to specify sync conditions with Confluence Query Language with item level permissions.

## Salesforce Connector

Index Salesforce objects such as Contacts, Opportunities, Leads, Cases, and Accounts, with search and summarizing functionality and item-level ACL permissions.

## File Share Connector

Index files and folders from on-premises file shares, with the ability to handle more than 5 million items in a connection, up to 30 connections, and up to 20 file paths in a connection.

## Enterprise Website Connector

Index web pages from intranet websites and public websites, with the ability to configure up to 50 URLs in a single connection.

## SharePoint Connector

Index SharePoint documents and webpages, enabling users to search for content stored in both online and on-premises SharePoint into one search experience.

# Federated Copilot Connectors

# Federated Copilot Connectors

Fetching data from MCP servers on demand.

Search and fetch real-time data directly from connected sources

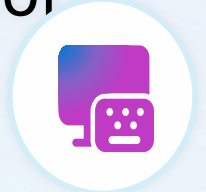

Gain powerful insights across 1P + 3P data with deep research in Copilot or Researcher

Users can securely connect to 3P source instantly, with no admin dependency

Admins can manage existing and deploy new federated Copilot Connectors

# Federated Copilot Connectors

Introducing two types of MCP based Connectors so that users can get started quickly and Admins can deploy their MCP servers as well.

## Out of Box MCP Connectors

Users can easily connect with one of the out of box connectors to securely fetch data on-demand and derive rich insights.

## Custom MCP Connectors

Admins can deploy their own MCP servers as connectors in just few clicks

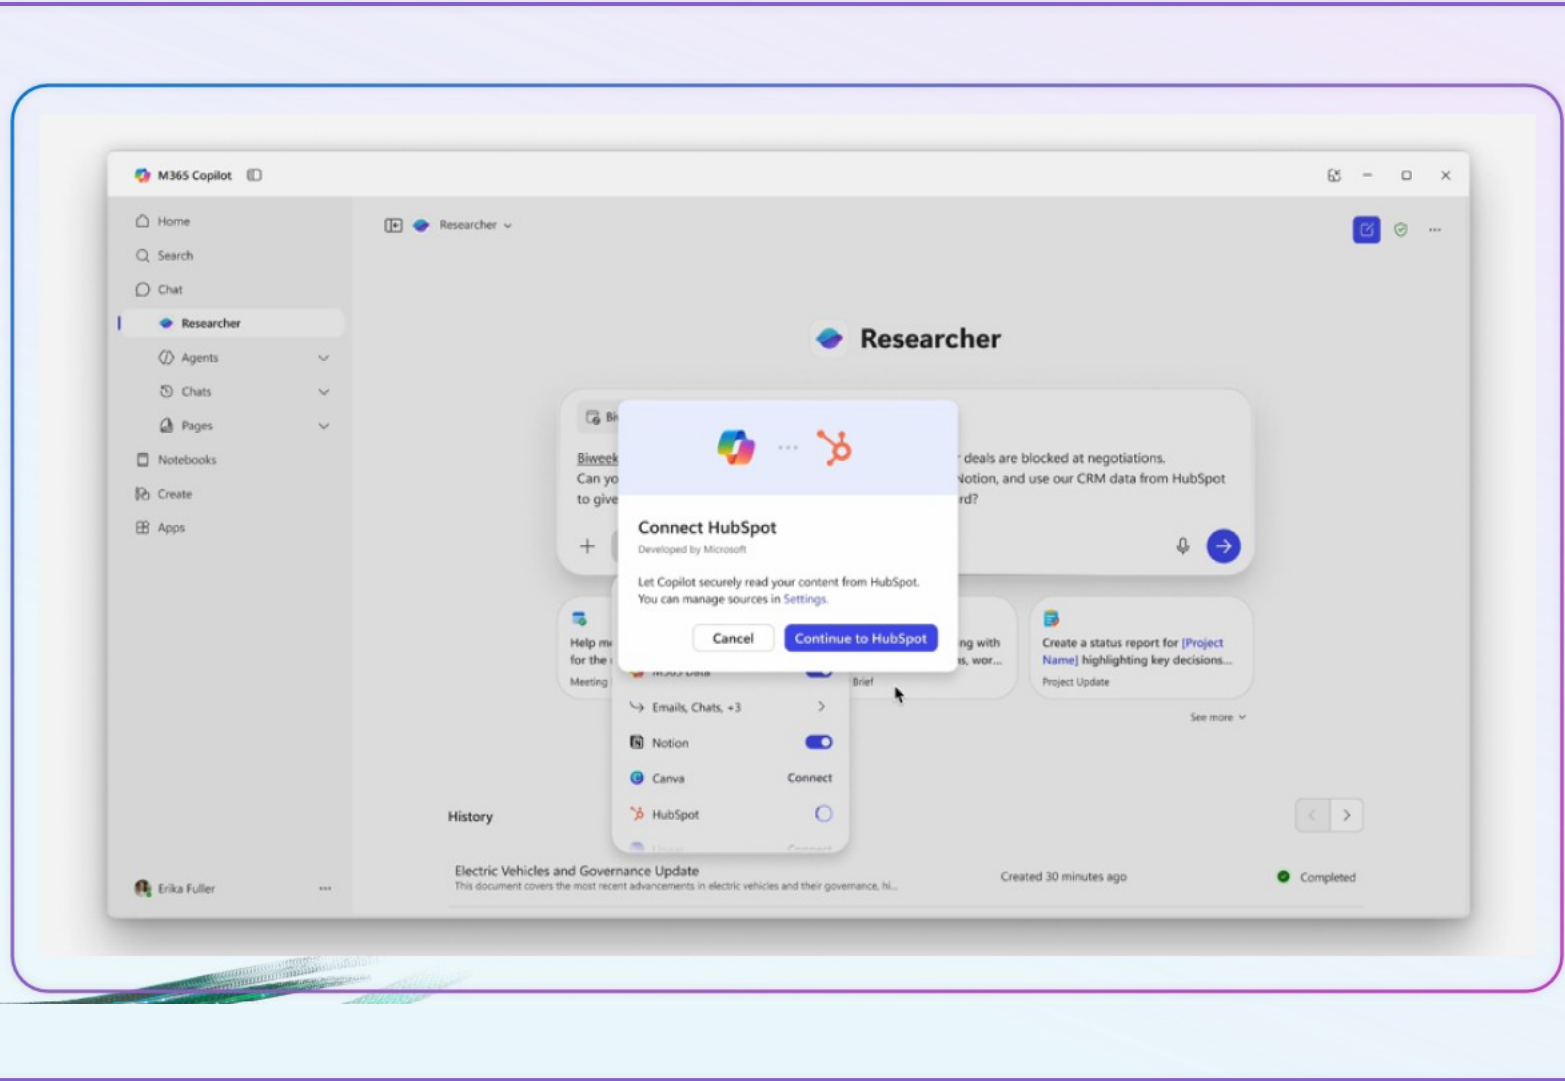

# Federated Copilot Connector

Out of Box Connectors

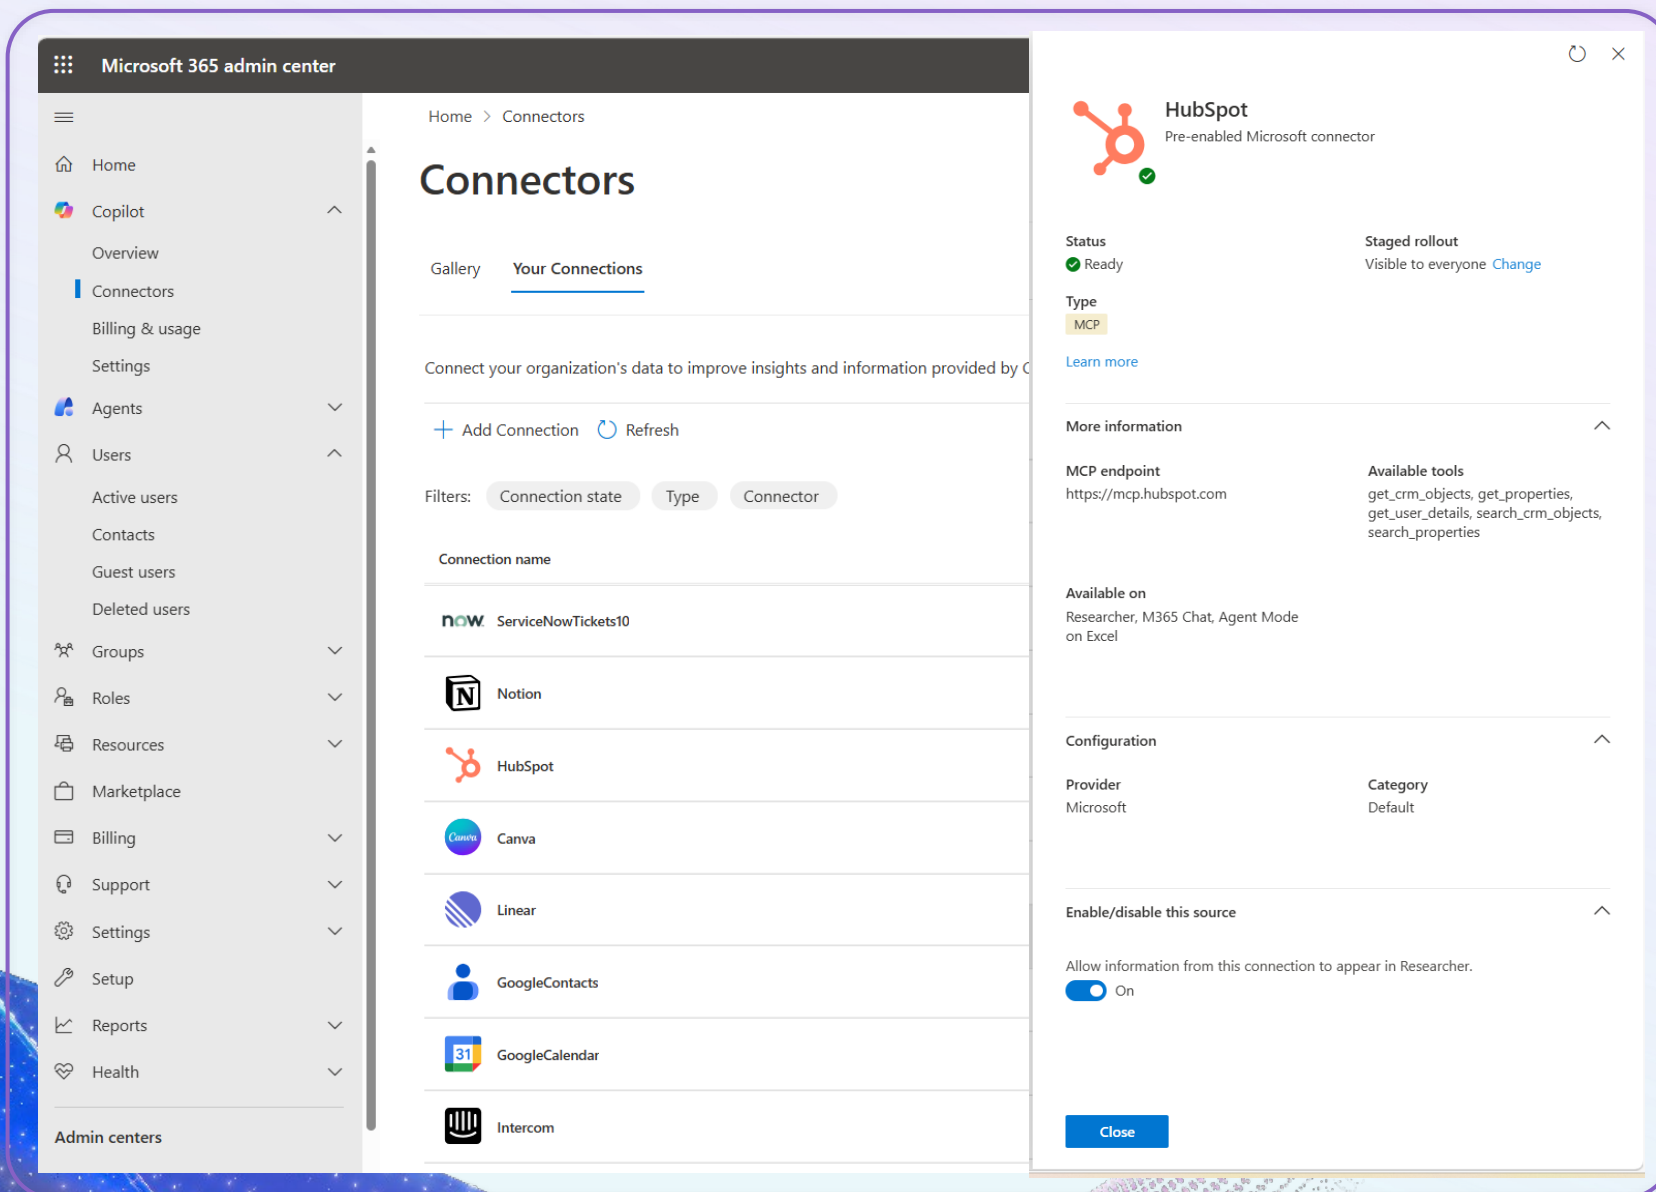

Derive rich insights from 1P + 3P sources together in Researcher.

# Unified Admin Management

Admins always in control

Admins can manage federated Copilot connectors just like any other Copilot Connector.

# 4

## Connectors - Demo

# Demo-Copilot Connector-Enterprise Website

| Scenario                                      | Description                                                                                                                                              |
|-----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Policy, Compliance &amp; Audit Lookups</b> | Employees ask Copilot about HR policies, travel rules, data retention, regulatory compliance guidelines, and audit procedures sourced from the intranet. |
| <b>Customer Stories &amp; Case Studies</b>    | Sales and marketing teams discover published customer success stories, testimonials, and case studies to support pitches and proposals.                  |
| <b>Company News &amp; Communications</b>      | Surface executive announcements, org changes, event calendars, and internal newsletters via natural language queries.                                    |
| <b>Cross-Site Knowledge Unification</b>       | Consolidate up to 50 fragmented web properties (departmental sites, regional intranets, partner portals) into a single Copilot-searchable experience.    |

## Sample Prompts

- *What is our company's remote work policy?*
- *What does our data retention policy say about customer records?*
- *What are the compliance requirements for handling PII data?*
- *What training courses are available about cybersecurity?*

## Q&A and Resources

# FastTrack support for Copilot Connectors & Agents

## Description

Microsoft 365 Copilot Agents empowers organizations to integrate AI capabilities directly into their workflows, driving productivity and innovation through tailored solutions. FastTrack also offers advanced deployment guides to accelerate the successful implementation of Copilot Agents.

FastTrack provides deployment guidance to help customers securely configure knowledge discovery and build Copilot Agents to suit the unique needs of their organization to help drive business transformation.

## Knowledge discovery and grounding

Empowering users to find and discover knowledge and information across business applications and data sources beyond Microsoft 365, leveraging Copilot Connectors.

**Setup:** *first-party Microsoft Copilot Connectors (third-party Microsoft Copilot Connectors documentation only).*

## AI-powered workflows

Building Agentic AI solutions to democratize AI for users and empowering organizations to build departmental and company-wide Agents to transform business processes.

**Setup:** *Copilot Studio Agent-builder Agents, pre-built Copilot Agents, SharePoint Online Agents, Microsoft Copilot Studio Agents*

## Security and governance

Preparing your Microsoft 365 environment and connected data sources using the Copilot Control System, including IT admin controls and reporting capabilities.

**Setup:** *Copilot Control System, Power Platform admin center controls for Copilot Agents, SharePoint Advanced Management, DSPM for AI, Usage and Reporting in MAC and Copilot Analytics, PayG and Message packs*

Additional FastTrack for Microsoft 365 information can be found at [Products and Capabilities - FastTrack - Microsoft 365 | Microsoft Learn](#)

# Get started with FastTrack today

- ① Visit [www.microsoft.com/FastTrack](http://www.microsoft.com/FastTrack)  
*Sign in for additional guidance and resources*
- ② Create a success plan

# SharePoint at 25 film: *More than Code*

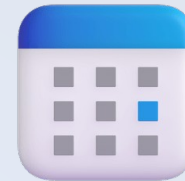

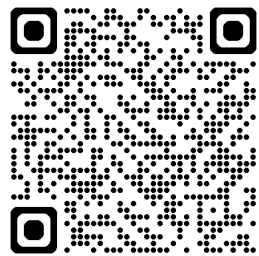

In honor of SharePoint's 25th birthday, *More Than Code* is a short film that explores the people, passion, and innovation behind one of the most transformative platforms in modern work. This film captures the stories of builders, leaders, and community champions who helped shape SharePoint into the knowledge backbone for collaboration, Copilot, and the next generation of agents.

SharePoint is more than code—it's 25 years of connection, innovation and impact.

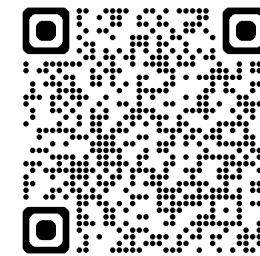

## **Watch the digital premiere**

Stream the documentary online globally in late April and celebrate SharePoint's 25-year journey from anywhere.

## **Watch the SharePoint at 25 digital event**

Prepare for the film with a special digital event featuring insights, stories, and what's next for SharePoint in the era of AI.
