# Session feedback surveys

We want to hear from YOU!

Share your feedback to make next years conference even better!

Here's how –

- Simply go to the Whova App on your smartphone.
- Scroll down on the M365 Community Conference Homepage to 'Additional Resources' to click "Surveys".
- Click Session Feedback.
- Scroll down to find this session title.
- Complete the session feedback survey.
- Finally, click 'Submit'.

It's just that easy!

# Agenda

## 1 **Agent Ecosystem**

Understanding the Spectrum of Agents and Governance Needs

---

## 2 **Agent Governance + Demo**

DLP, Environment Strategies, Identity, Security, and Purview

---

## 3 **Agent Lifecycle Management + Demo**

5-phase ALM framework: Discovery → Design → Build → Deploy → Monitor

---

## 4 **FastTrack & Resources**

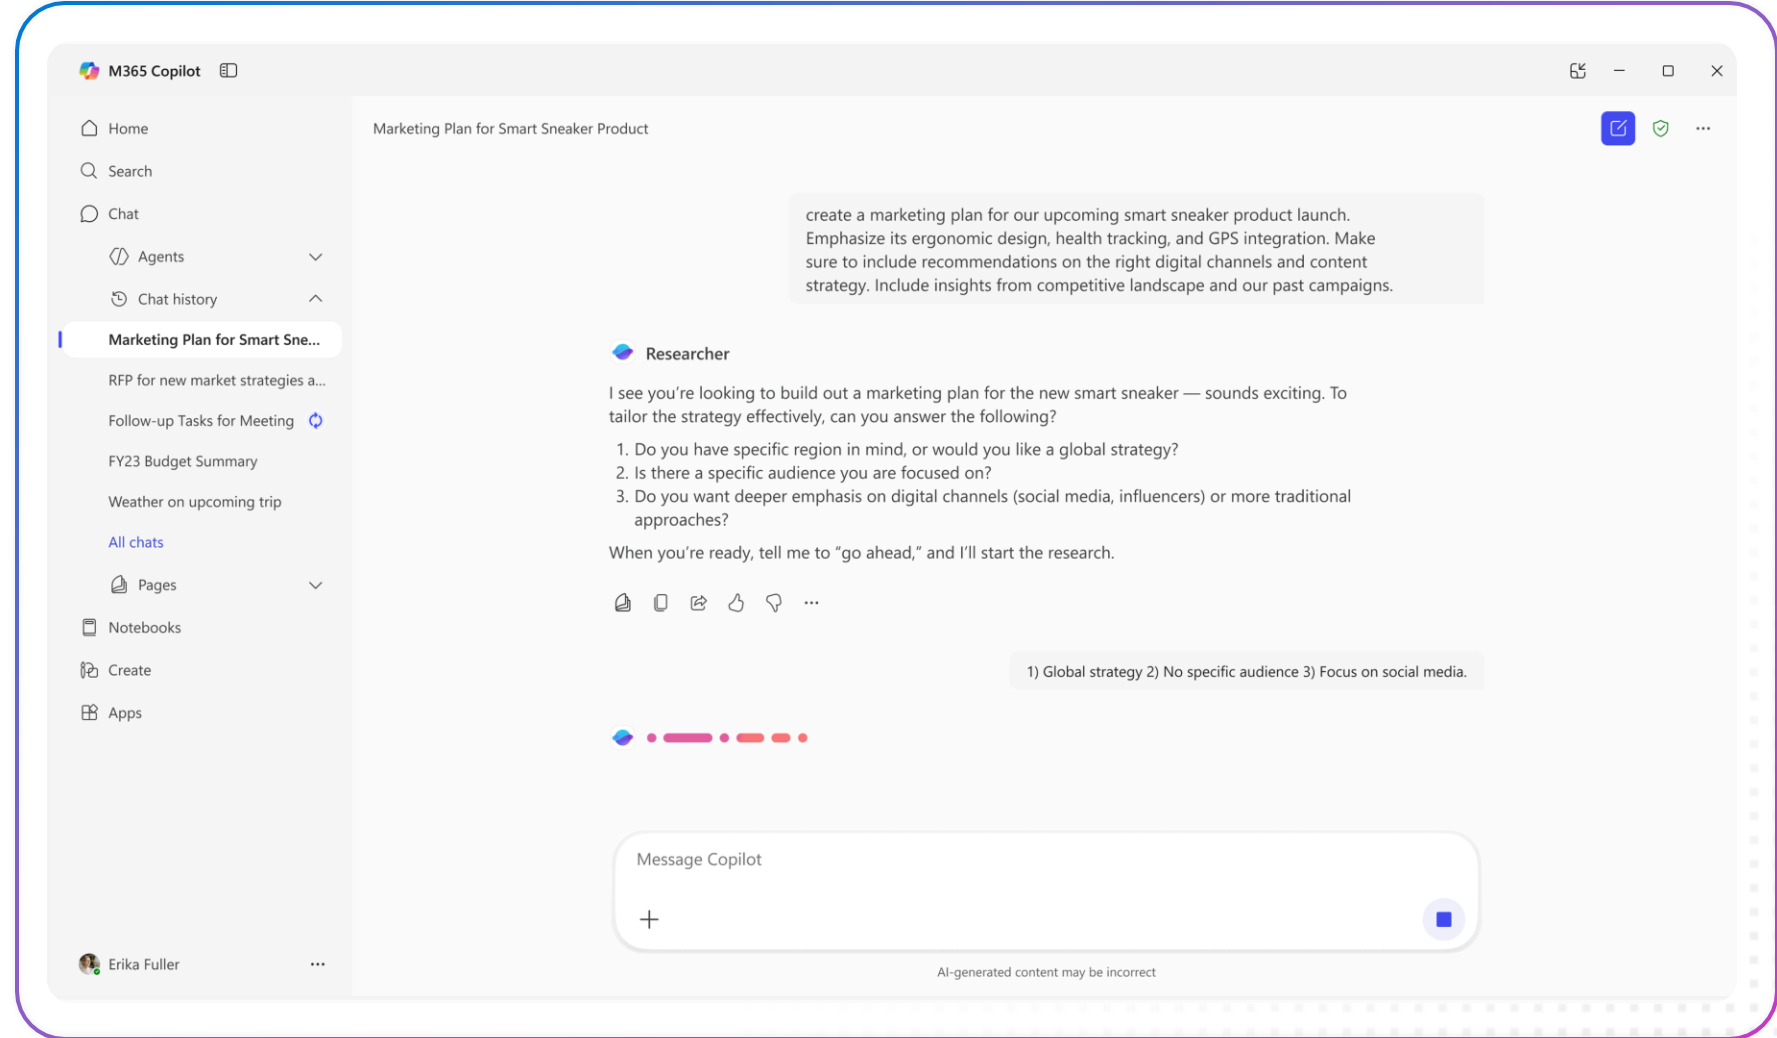

How FastTrack Accelerates Your Agent Governance Journey

---

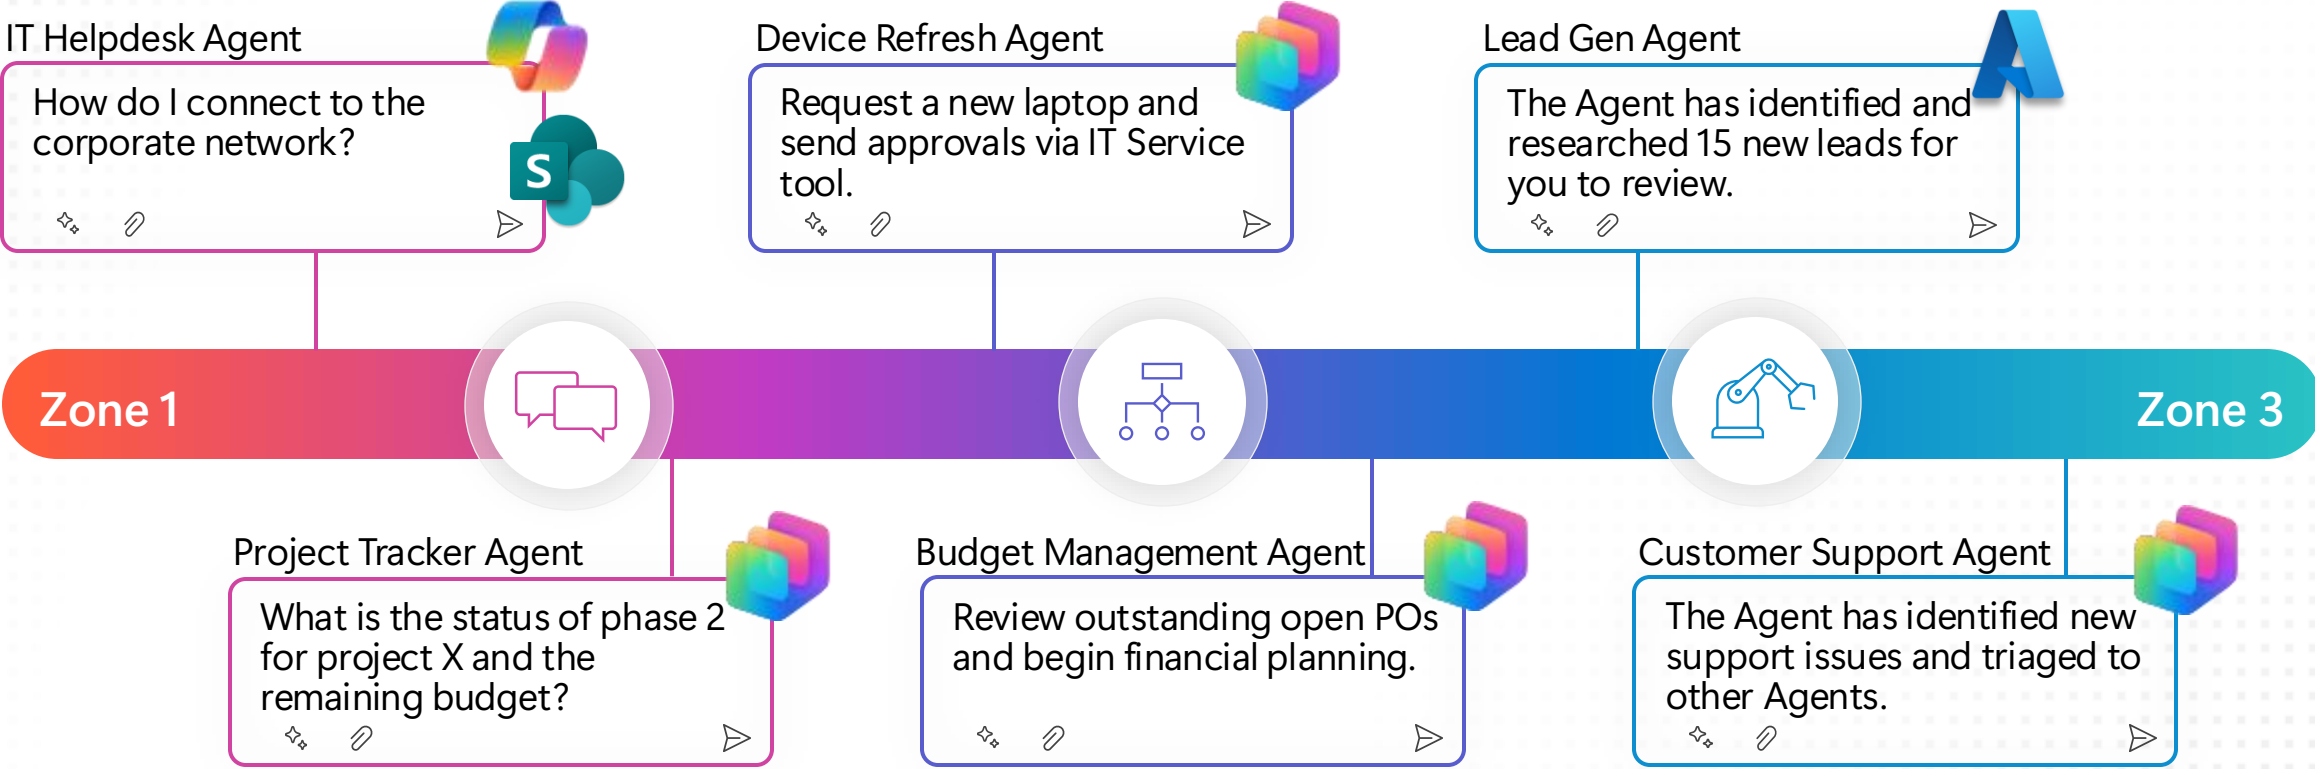

# The Agent Ecosystem

# Agents

A broad ecosystem of pre-built Agents available in the Agent Store, Microsoft 365 apps, and tools to build your own Agents in Copilot Studio.

# Explore a Continuum of Solutions

# Zoned Security, Governance, and Operations

Zone 1

Zone 2

Zone 3

Purpose

Citizen Dev Agent creation (DIY) for personal use and experimentation with safe defaults

Team or Department Agents in the partnered DIY zone require formal assistance and oversight from a DIY coach, but are built by trained citizen developers

Large, potentially risky Agents in the professional development zone are reserved for pro dev & IT-led development only

Secure

Only M365 and Power Platform Connectors  
Agents run in user's context only

Zone specific Advanced Connector policies in Power Platform Admin Center  
Teams share access to approved Data sources  
Scale with Environment groups + rules  
Additional Runtime Protection

Zone specific Advanced Connector policies in Power Platform Admin Center + Purview

Govern

Personal use Agents in Developer Environments. Environment routing keeps Agents isolated to maker. Sharing disabled and scoped to just Maker use

Admin approved environments provisioning  
Scoped roles and sharing policies  
ALM Pipelines for Agent versioning  
IT-admin approval to publish Agents

Manage sharing via Integrated Apps in Microsoft Admin Center

Monitor

Review Agent usage in Copilot Hub in Power Platform

Track Agent usage and security posture in Microsoft Admin Center, Microsoft Purview, and Power Platform Admin Center

# Top Security and Governance Concerns About Generative AI

## Data Oversharing and Data Leaks

80%

of leaders cited leakage of sensitive data as their main concern<sup>1</sup>

## Identification of Risky AI Use

41%

of security leaders cited that the identification of risky users based on queries into AI was one of the top AI controls they want to implement<sup>2</sup>

## AI Governance and Risk Visibility

84%

want to feel more confident about managing and discovering data input into AI apps and tools<sup>2</sup>

1. First Annual Generative AI study: Business Rewards vs. Security Risks, Q3 2023, ISMG, N=400

2. [Microsoft data security index 2024 report](#)

# Agent Governance

- Copilot Control System
- Agent 365

What are the **challenges** you face  
**securing, governing and scaling**  
Agents today?

# Copilot Control System

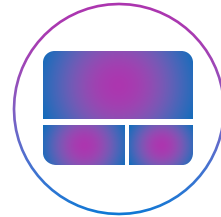

## Copilot + Agents

### Security & Governance

Data Security  
AI Security  
Compliance & privacy

### Management Controls

Copilot licensing  
Agent lifecycle  
Metering controls

### Measurement & Reporting

Readiness and adoption  
Productivity shifts  
Business value & ROI

# Existing Security and Governance Capabilities

## Prepare

**Rules** – Limit Agents sharing using Rules in [PPAC](#) and [MAC](#).

**Maker alerts** – Review security alerts before publishing an Agent when secure defaults are modified.

**Authentication** – Configure Agents manual authentication to use Entra ID with certificate provider in Copilot Studio to fulfill Secure Future Initiative requirements.

**SharePoint Agents** – Only users who can create or access files on a SharePoint site can create or access Agents. Adheres to content access protocols including file sensitivity labels, [Restricted Access Control policy](#), and [Restricted Content discovery](#). Responds based on asker's permission settings.

## Discover

**Data Security Posture Management (DSPM) for AI** – Receive recommended actions for quick responses during incidents,.

**Activity Explorer in DSPM for AI** – Discover all Agents as well as the sensitivity of data in user prompts and Agent responses as well as potential risky AI usage.

**\*Agent 365** – Central inventory and visibility layer – helps IT understand *what Agents exist, who owns them, and where, they're used across the organization.*

## Protect

**Risky AI usage indicators** – Detect and respond to these potential incidents to minimize the negative impact.

**Information Protection** – view the highest sensitivity label in an Agent's Knowledge with SharePoint response and honoring sensitivity labels through label inheritance, as well as enforcing label permissions.

**DLP for Copilot** – When DLP for Copilot is set, Copilot Agents created by end-users and makers are also protected when the data source is SharePoint.

**Data Oversharing Assessments** –These assessments can pinpoint sensitive data referenced by Copilot and Copilot Agents when data source is SharePoint.

**Data Masking** – Implement a mask policy on a table in Power Apps to safeguard sensitive data, which will be honored by Copilot Studio.

**Additional Runtime Protection** – Add an additional layer of defense and safeguard against threats like prompt injection attacks using preferred security infrastructure.

## Govern

**Advanced Connector Management** – Govern various Agent features (knowledge, actions, connectors, publish, channels, auth, app-Insight, skills, etc.) through connector management in the [Power Platform Admin Center](#) (PPAC).

**Data Compliance** – Retain all the data in Agent interactions with retention policies in Data Lifecycle Management and record all the activity logs in Microsoft Audit. Organizations can conduct investigations using eDiscovery to preserve, collect, and review all relevant data.

**Communication Compliance** – Set up policies to detect prompts containing sensitive data and non-compliant data allowing them to have visibility into potential risks.

**Security Copilot** – Support investigation, blast-radius, and response. Protects outcomes.

**\*Agent 365** – Provides centralized governance and lifecycle visibility.

# Existing Controls, Visibility & Oversight

## Management Controls

### Environment routing, groups, and rules

Admins can configure environment routing in PPAC to provide their makers a safe space to build Agents & scale environment provisioning.

### Maker message

Admins can configure welcome message in PPAC to inform makers about important privacy and compliance requirements for Agents.

### AOAI cross geo

Admins can disable AOAI cross geo control to avoid gen AI calls from going outside the geographic boundary.

### Pipeline

Admins can configure Pipeline in Copilot Studio to ensure that Agent deployment to shared environments are approved.

### Disable Agents

Admins can disable Agent Builder, Workflows Agent, and App Builder experience in M365 Copilot in Microsoft Admin Center (MAC).

### Activity Explorer in DSPM for AI

Admins can discover all Agents as well as the sensitivity of data in user prompts and Agent responses as well as potential risky AI usage.

### SharePoint Agents

Admins can limit or disable SharePoint Agents via licensing assignment, setting a team site as private, set site permissions. Admins can also use RCD (disable site by site) or RAC (restrict access to identified users) to restrict access. Admins can also disable access via the SP Online Management Shell.

### Disable Agent sharing

Admins can disable sharing Agent Builder Agents in M365 Copilot in Microsoft Admin Center (MAC).

### Reassign Agents

Admins can reassign Agent Builder Agent owners in M365 Copilot in Microsoft Admin Center (MAC).

## Measurement & Reporting

### Audit logs

Admins have full visibility into their Agents' makers & authenticated end users audit logs in Microsoft Purview.

### Monitor & alerts

Admins can monitor and receive alerts on Agent activities through Microsoft Sentinel.

### Usage

Admins can see usage & active Agents count of Agent Builder Agents and Agents that get shared in M365 in MAC.

### Inventory

Admins can see inventory of Agent Builder and Agents that get shared in M365 in MAC.

### SharePoint Agents

Unique views (rendered chat instances with the Agent) available from SharePoint site statistics. Within Azure, admins can access consumption data. Using Microsoft Purview, Admins can see file-based audit events and configure Agent files to be included in Insider Risk Management or DLP policies and reports. Additional metrics coming soon via the M365 Admin center, PowerShell, and Copilot Analytics dashboard.

# Shifting left with security

Security, Governance, & Observability for Build-Time and Deployment

## Microsoft Copilot Studio

Foundational security and governance at **build-time**

Baseline build-time controls in the managed platform

With Copilot Studio's built-in security and governance guardrails, innovate and create Agents with confidence that Agents begin their lifecycles safely configured

## Microsoft Agent 365

Optimized security and governance at **scale**

Policy-driven, automated governance in the Agent control plane

Agent 365 delivers identity-based policy and tenant-wide enforcement with a wealth of Microsoft Security services – purpose-built for Agents

# Observe

Gain visibility into Agents in your environment, understand how they're used, and act quickly on performance, behavior, and risk signals before they impact the business.

# Govern

Establish guardrails for Agents and people, onboard Agents with IT oversight, and govern Agent access to resources and data. Be audit ready with built-in compliance and data retention.

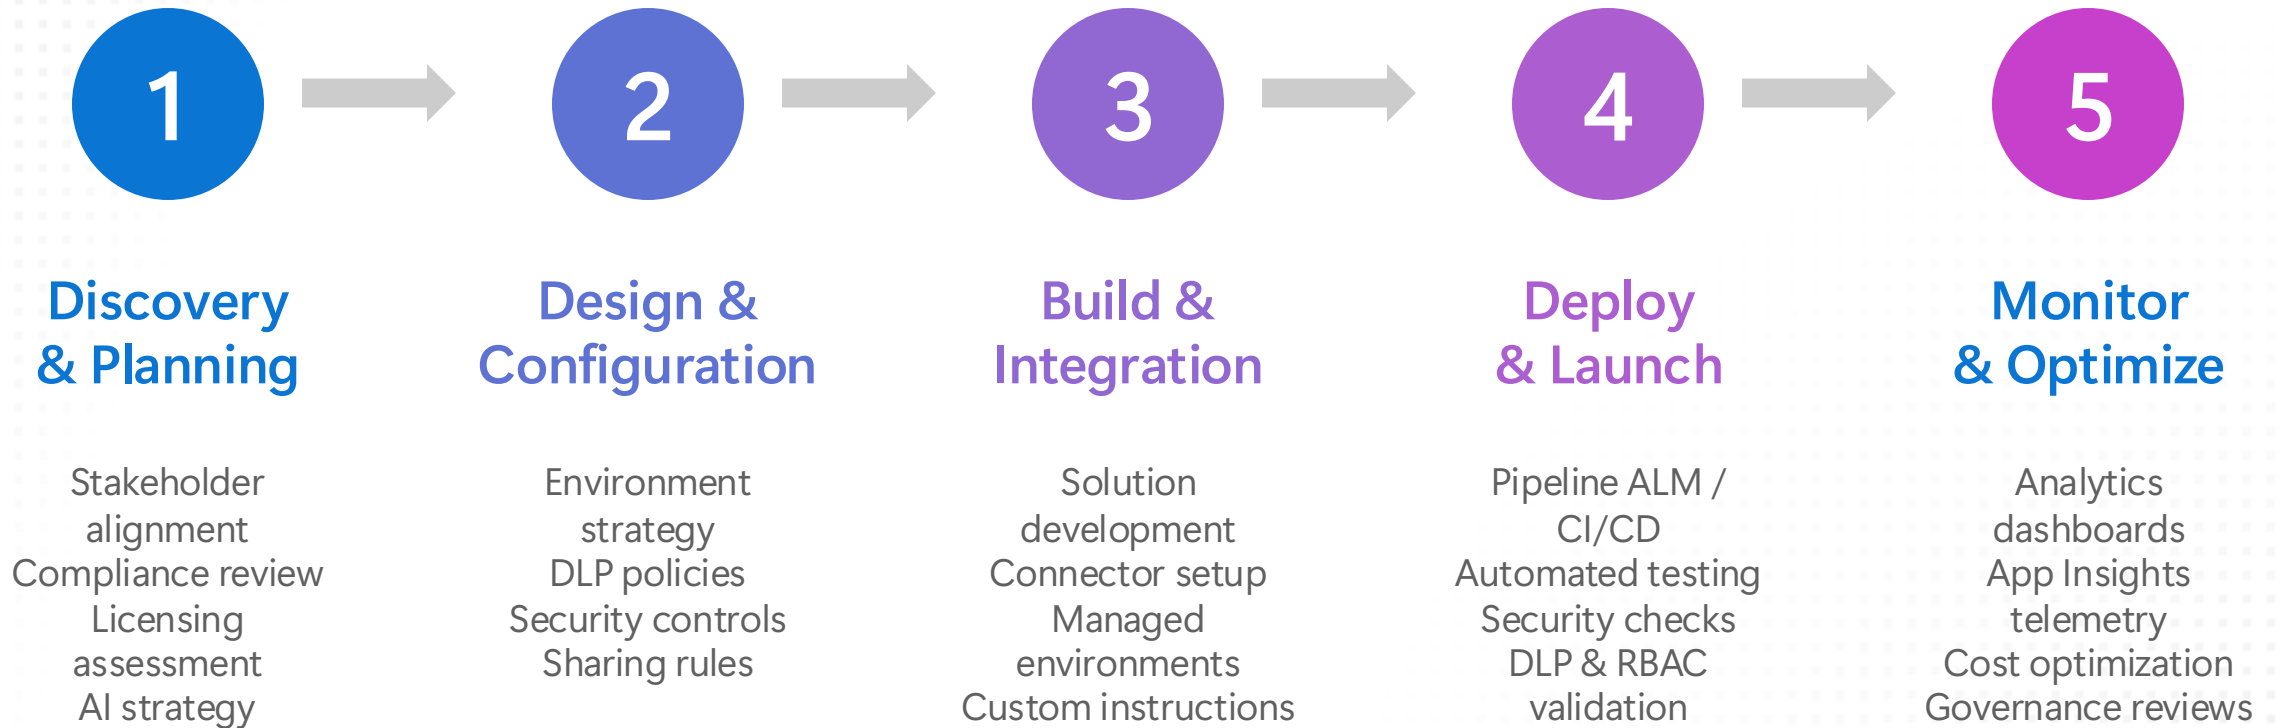

**Microsoft 365**  
COMMUNITY CONFERENCE

**Demo**

# Agent Lifecycle Management

# 5-Phase ALM Framework for Agent Governance

# Personal playgrounds with Environment Routing

Routing allows administrators to automatically direct users to personal developer environments **moving their makers away from the default environment.**

- Supports Copilot Studio, Power Apps, Power Automate Cloud and Desktop, and Flow Builder
- Designed to support simple to complex organizational structures
- Attribute-based conditions via security groups, or based on user properties such as geography or department
- Priority-based rule evaluation

The screenshot displays the Power Platform admin center interface. On the left, the 'Manage' sidebar is visible with various settings categories. The main content area shows 'Tenant settings' with a table of settings. A notification at the top indicates 'Your settings have been successfully saved.' On the right, a modal window titled 'Create and manage environment routing rules' is open, showing options to turn on environment routing for Power Apps, Copilot Studio, Power Automate cloud flows, and Power Automate desktop flows. Below this, a table lists three routing rules.

Rule Name	Priority	Security Group	Environment Group
Green Zone - AUS	1	Woodgrove IT	Woodgrove - aus
Green Zone - US	2	Woodgrove HR	Woodgrove - US
Green Zone - Global	3	Everyone	Green Zone

# Govern at Scale with Groups and Rules

## Bulk Governance

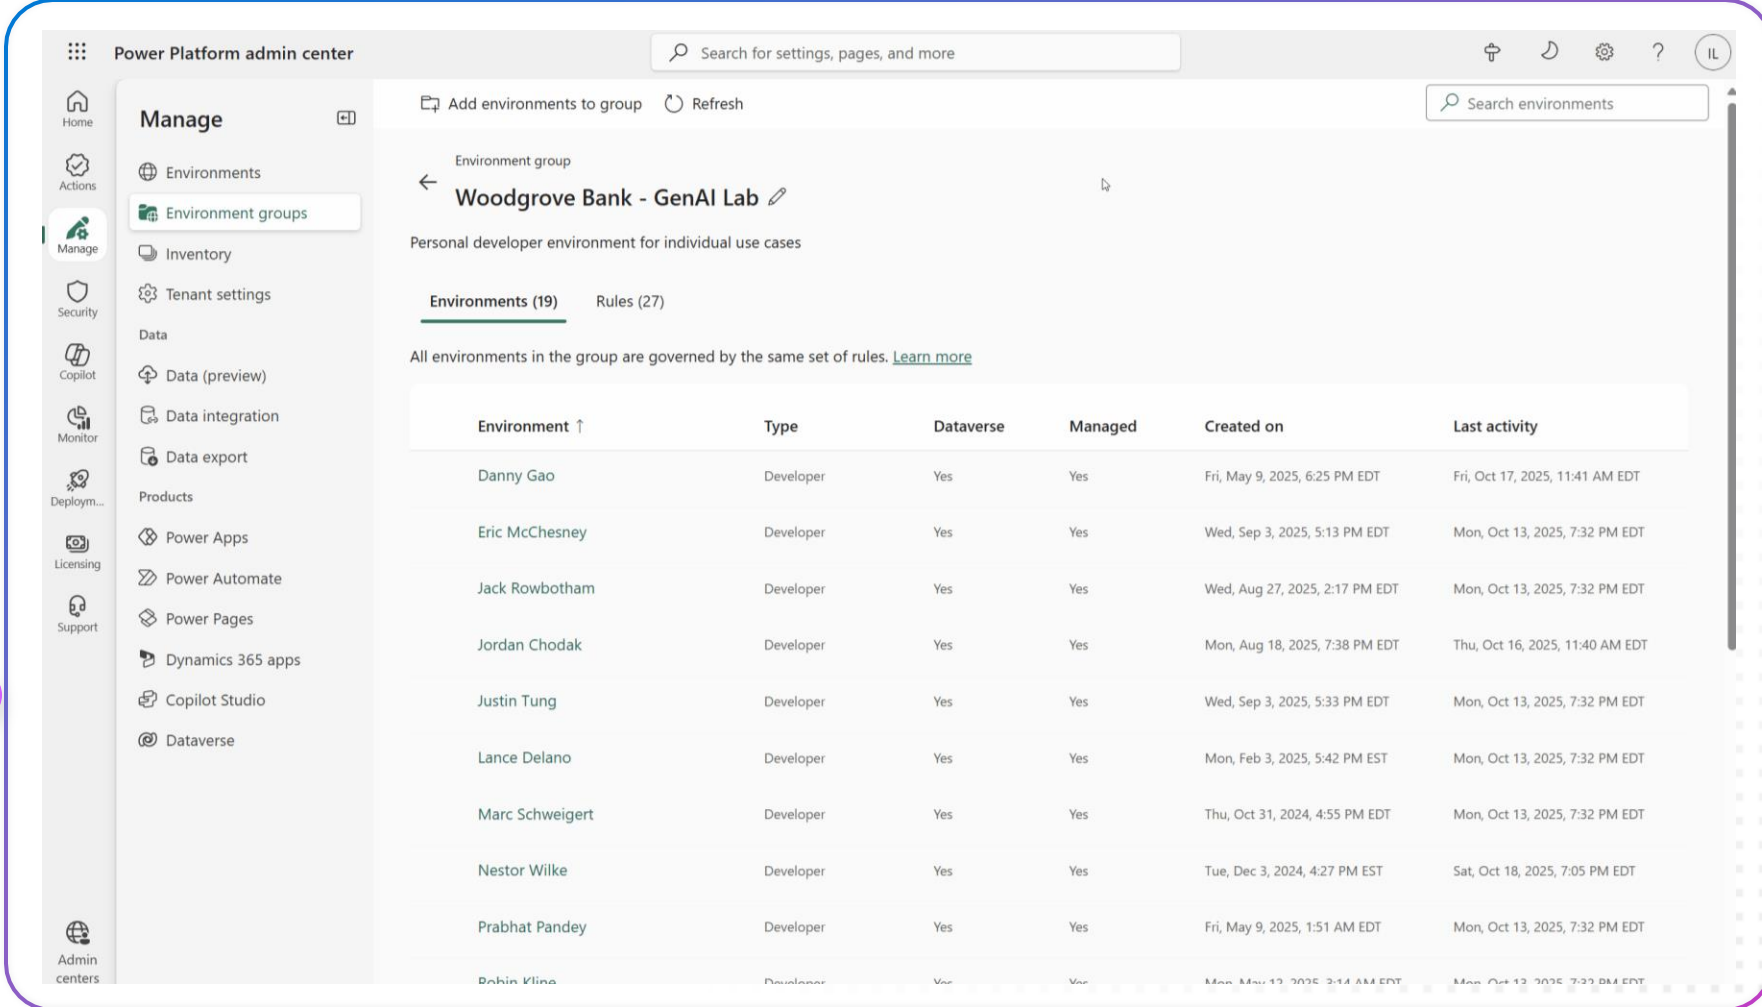

Cluster environments into environment groups and govern thousands at scale — no one-by-one configuration.

## No Drift

Apply rules consistently across environments in the group—locking settings and preventing configuration drift.

## Govern AI at scale New

12+ new rules to control aspects like model choice to sharing — now configurable in Copilot Hub too.

# Simplified Deployment

Discoverable and intuitive for diverse audiences. DevOps is accessible within Copilot Studio. Deploy with less effort.

## ALM for All with Preferred Solution

Starts makers with “healthy” ALM, across all maker experiences.

[aka.ms/Preferred-Solution](https://aka.ms/Preferred-Solution)

## Default Pipeline Environment Rules

No more manual pipeline management. Makers are automatically onboarded to the default pipeline.

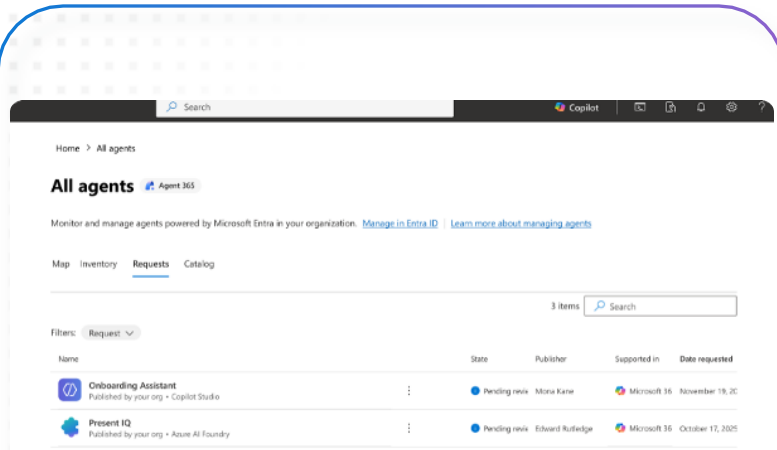

[aka.ms/Default-Pipeline](https://aka.ms/Default-Pipeline)

The screenshot displays the Copilot Studio interface for an agent named "My Safe Travel Agent". The top navigation bar includes "Overview", "Knowledge", "Tools", "Agents", "Topics", "Activity", "Analytics", and "Channels". A notification states: "Because you chose Microsoft authentication, only the Teams + Microsoft 365 and SharePoint channel is available. To use other channels, change your authentication settings." The "Published agent status" section shows the agent was published on 5/21/2025 at 9:08 AM. The "Share a preview" section includes a "Demo website" option. The "Microsoft channels" section lists "Teams and Microsoft 365 Copilot" and "SharePoint". The "Other channels" section lists "Web app", "Native app", "Facebook", "WhatsApp", "Slack", "Telegram", "Twilio", "Line", and "GroupMe". The "Direct Line Speech" and "Email" options are also visible. The "Customer engagement hub" section provides instructions on connecting to a live agent. On the right, the "Test your agent" panel shows a sample response: "Hello, I'm My Safe Travel Agent Agent, a virtual assistant. Just so you are aware, I sometimes use AI to answer your questions. I'm here to assist you with all your safe travel inquiries. Whether you need information about travel documents, visa requirements, local regulations, consulate details, or travel insurance options, I've got you covered." A note below the response says: "Note: You can now customize this agent's topics and knowledge for your own needs. For more information about this agent and how to modify it, visit the agent documentation." The interface also shows a search bar, "Published 5/21/2025", "Publish", "Settings", and "Test" buttons.

# Manage Copilot Studio Agents Built by Your Organization

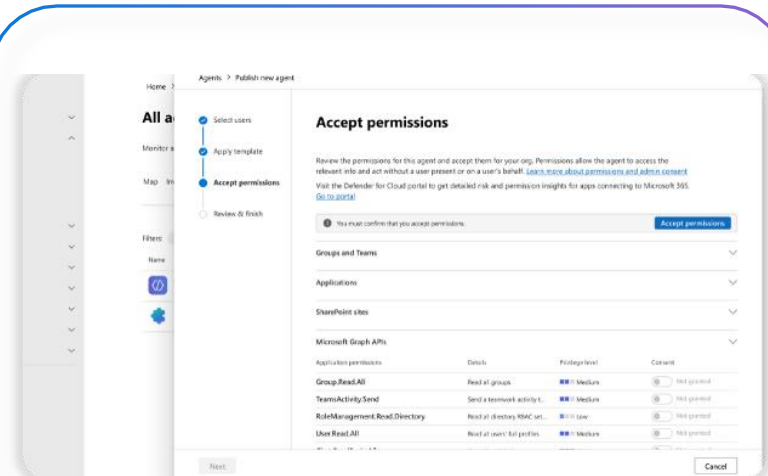

## IT View

### How to deploy and make it accessible from Agent Store

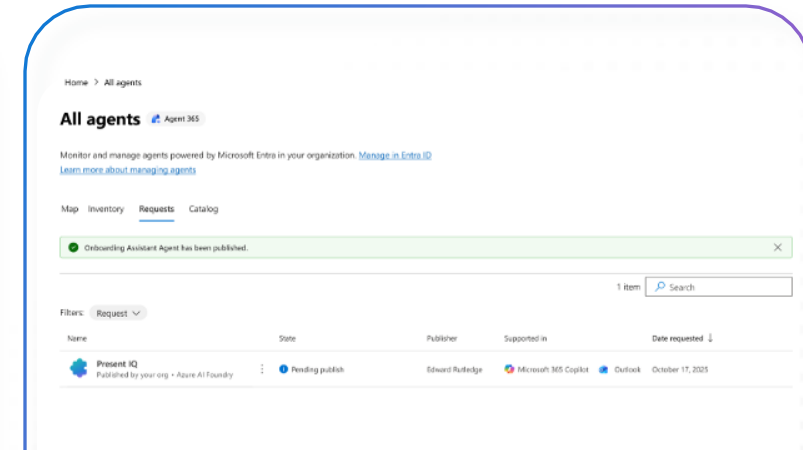

#### Discover New Agent Requests

Navigate to the Requests tab under Agents > All Agents in the Microsoft 365 Copilot admin center. Here you can view all pending requests for new and updated Agents.

#### Review Details for Pending Agents

Select a pending request to view more details and metadata, including the Agent's description, maker, connected data and tools, and more. If the Agent is approved, select Deploy and accept any necessary permissions as prompted.

#### Deploy or Reject Agents

If deployed, the Agent will become available in the Agent Store for your org users.  
If rejected, the maker will be notified in Copilot Studio for updates and resubmission.

# Test and Evaluate Copilot Studio Agents

## Automated Testing for Agents

Structured, automated testing enables makers to evaluate Agent quality before and after deployment eliminating need for manual, ad hoc testing.

## Flexible, Scalable Evaluation Methods

- Create evaluation sets using manual questions, imported files, get questions from prod data or even AI-generated queries
- Multiple test methods with pass/fail scores and insights
- Compare runs to track improvements and catch regressions

## Continuous Improvement & Risk Reduction

Identify issues early, help reduce risk, and maintain quality as Agents evolve.

Build → Test → Improve

[aka.ms/CopilotStudioEvals](https://aka.ms/CopilotStudioEvals)

The screenshot shows the Copilot Studio interface for the 'Helpdesk agent' in the 'Prod environment'. The 'Analytics' tab is active, showing a 'Weekly full agent evaluation' test set. A table lists 32 test cases, with one selected. The 'Edit test case' modal is open, showing the question 'What if there is an emergency?' and the expected response 'In an emergency, remain calm, listen for announcements, and follow crew directions. Head to the nearest safe area or lifeboat station as instructed, and assist others if needed.' The test method is set to 'Compare meaning'.

# FastTrack & Resources

# FastTrack support for Copilot Agents

## Description

Microsoft 365 Copilot Agents empowers organizations to integrate AI capabilities directly into their workflows, driving productivity and innovation through tailored solutions. FastTrack also offers advanced deployment guides to accelerate the successful implementation of Copilot Agents.

FastTrack provides deployment guidance to help customers securely configure knowledge discovery and build Copilot Agents to suit the unique needs of their organization to help drive business transformation.

## Knowledge discovery and grounding

Empowering users to find and discover knowledge and information across business applications and data sources beyond Microsoft 365, leveraging Copilot Connectors.

**Setup:** *first-party Microsoft Copilot Connectors (third-party Microsoft Copilot Connectors documentation only).*

## AI-powered workflows

Building Agentic AI solutions to democratize AI for users and empowering organizations to build departmental and company-wide Agents to transform business processes.

**Setup:** *Copilot Studio, Agent-Builder Agents, pre-built Copilot Agents, SharePoint Online Agents, Microsoft Copilot Studio Agents*

## Security and governance

Preparing your Microsoft 365 environment and connected data sources using the Copilot Control System, including IT admin controls and reporting capabilities.

**Setup:** *Copilot Control System, Power Platform admin center controls for Copilot Agents, SharePoint Advanced Management, DSPM for AI, Usage and Reporting in MAC and Copilot Analytics, PayG and Message packs configuration in MAC and PPAC*

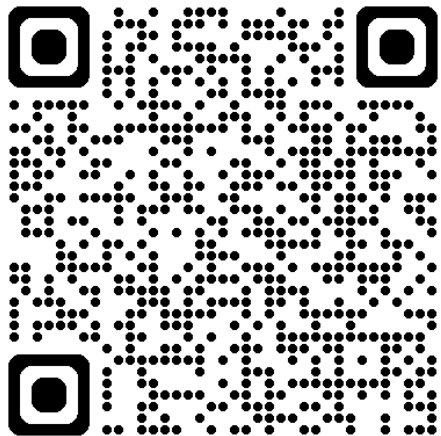

Additional FastTrack for Microsoft 365 information can be found at [Products and Capabilities - FastTrack – Microsoft 365 | Microsoft Learn](#)

# Get started with FastTrack today

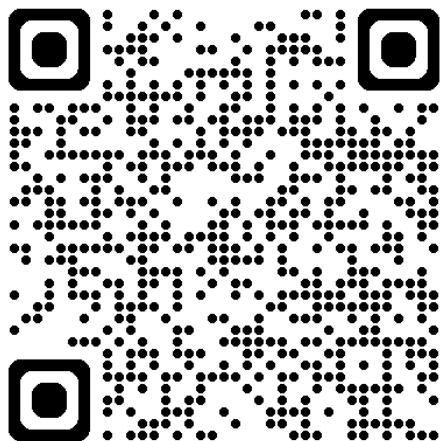

- 1** Visit [www.microsoft.com/FastTrack](http://www.microsoft.com/FastTrack)  
*Sign in for additional guidance and resources*
- 2** Create a success plan  
*Establish implementation and user adoption goals, tactics and strategies*
- 3** Get resources and ask for help  
*Review resources and submit a Request for Assistance*

# SharePoint at 25 short film: *More than Code*

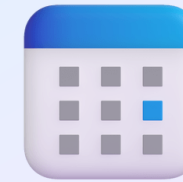

In honor of SharePoint's 25th birthday, *More Than Code* is a short film that explores the people, passion, and innovation behind one of the most transformative platforms in modern work. This film captures the stories of builders, leaders, and community champions who helped shape SharePoint into the knowledge backbone for collaboration, Copilot, and the next generation of Agents.

SharePoint is more than code—it's 25 years of connection, innovation and impact.

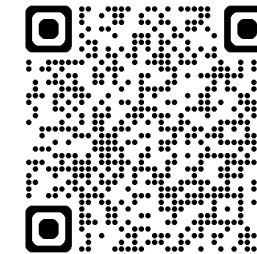

Watch the digital premiere

Stream the documentary online globally in late April and celebrate SharePoint's 25-year journey from anywhere.

Watch the SharePoint at 25 digital event

Prepare for the film with a special digital event featuring insights, stories, and what's next for SharePoint in the era of AI.
